

# A health system health check

Health systems are struggling to improve the bottom line while maintaining quality care.

## IT ALL ADDS UP:

- ✗ Cost of readmissions
- ✗ Ongoing staffing problems
- ✗ Changing government policies
- ✗ Rising cost of labor, supplies, and pharmaceuticals

## NONADHERENCE ANNUAL COST:

 **25%**  
of hospitalizations

 **\$300 billion**  
in avoidable healthcare costs

# There's a better way

UP TO **15%** bump in MyChart or other EMR signups by increasing engagement

REWRITING THE SCRIPT

## New patient engagement opportunities

### Actionable insights

Our easily configured reports track prescription capture rate, with reporting that saves time and money by avoiding prescription leakage.

### Pharmacy efficiency

With real-time pharmacy benefit check and automated PA process, pharmacists spend less time doing manual work.

### Seamless workflow

Doctors can send digital prescriptions and store the patient's medical history all within the EMR.

### Digital experience

Prescriptions are automatically converted to a digital prescription. The workflow is the same as an ePrescription, but the patient has more decision support and ownership.

### Transparency and choice

The patient can compare insurance price and cash price at nearby pharmacies, providing ownership of their prescription and budget.

### Cost conscious

Doctor and patient can decide during the appointment whether to swap to a lower cost, therapeutically equivalent medication.
